October 2010

Introducing the new unique “flat bottomed” steel cylinder

Pre order now for mid-October delivery

- Its concave bottom allows the cylinder to stand on its own, without requiring a cylinder boot.
- The new bottom shape results in a heavier cylinder compared to a classic cylinder (+0.6kg).
- The additional weight is beneficial for balancing twin sets, as it is concentrated in the base of the cylinder.
- The 12L new style steel cylinder is available with either DIN G5/8 or M26 valves.

Part number	Description	RRP
S16816688	Cylinder steel 12L, concave 232 bar/standard G5/8 valve	£212
