

Summer 2010: Halcyon Dive Vehicles

Halcyon divers have a long history of using diver propulsion vehicles to explore some of the most remote and extreme aquatic environments around the globe. This history along with countless hours "on the trigger" has culminated in two collaborative dive vehicle designs that represent a superior blend of performance and reliability in addition to the right balance of speed, thrust and power consumption. The new Halcyon Dive Vehicle (HDV) offerings have the appropriate mix of features needed to cruise your favorite reef, cover bow to stern on your favorite wreck and push the end of the line in virgin cave. Whether your dives are decidedly recreational or progressively more extreme, Halcyon offers a Dive Vehicle that is suited to your particular diving style with simple intuitive functionality, effortless maneuverability, compact design, easy adjustment for fresh/salt water use and a world class warranty that comes complete with worldwide support and service.

Halcyon Dive Vehicles
will be arriving
June 2010
